

BETEC RCC-MEMBRANES

Mission Statement:

The council will coordinate and strategize efforts to better understand the functions of the membranes within the building enclosure and to improve the in-service performance of the building enclosure.

Scope

This committee will be concerned with a systematic approach to membranes, including

- “ what defines a membrane?
- “ what are its key functions and what are their priority?

Initially the focus will be membranes that control the transport of heat, air and moisture (liquid and vapor) at the exterior and interior of the building enclosure. This includes flashing, and the use of membranes with windows and doors.
